

Cloning a Repository

- I started by cloning the GitHub repository using git clone using the URL that was posted.
- After cloning, I added my name to CONTRIBUTORS.md and modified README.md.
- Then, I committed and pushed the changes using git add . , git commit -m, and git push.

Basic Git Commands

- Next, I created a file called hello.txt with some text, staged it with git add, and committed it.
- I also modified the file later and checked the difference using git diff before committing again.

Branching and Merging

- Then I created a new branch called feature-branch using git branch and switched to it.
- I added a new file called feature.txt and committed it separately.
- Later I merged feature-branch back into main using git merge.

```
C:\Users\TMB\week1-git-lab>git log --oneline --graph --all
* dfeb5e1 (HEAD -> main, origin/main, feature-branch) Added feature.txt in feature-branch
* 75808cb Updated hello.txt with welcome message
* 81e4e2c Initial commit: Added hello.txt

C:\Users\TMB\week1-git-lab>git add CONTRIBUTORS.md README.md
fatal: pathspec 'CONTRIBUTORS.md' did not match any files
